↑
Switch button ↑ Power/CAN slot ↑ GPS (RGB) input ↑ Video Out/input

↑ LCD-OUT (data output) LCD-IN (data input) ↑ Slot of pallet ↑ Function Setup

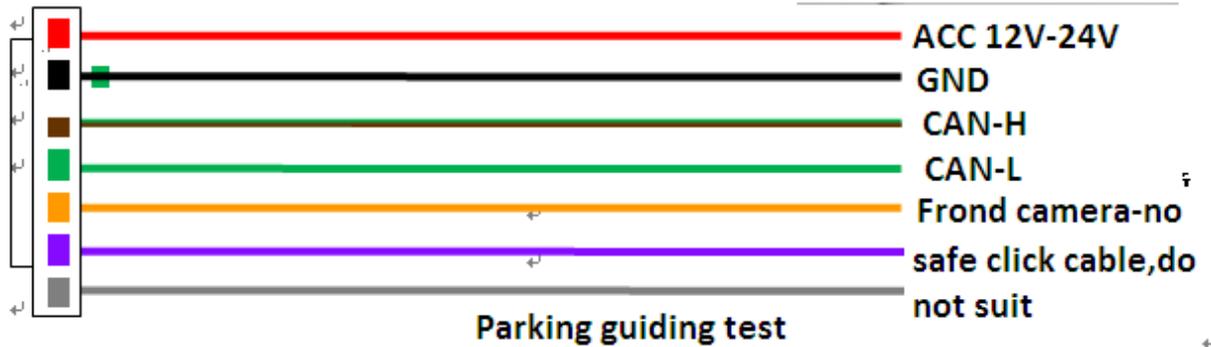

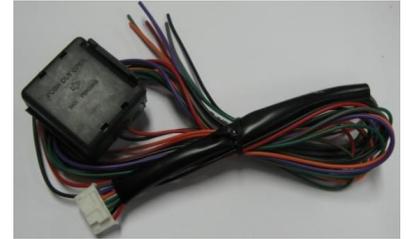

(2) power cable and RGB slot

Power cable:

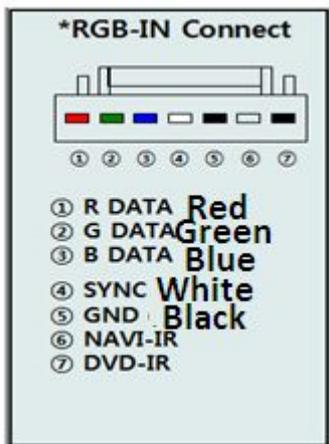

This power cable is for safe power, has filter, better for picture quality.

Define to all the cable upwards

- (1) red ACC power cable connect to ACC:8V-16V,better input is 12V
- (2) black connect the earth
- (3) orange cable is the front camera(do not support now,..) when you use it,do not need to connect now
- (4) purple cable is the safe cable, do not use.
- (5) grey cable is the parking control: set the control signal for camera, ensure when parking the screen can auto skip to parking shot, this car model is CAN control parking, so this cable do not need to connect.

RGB define:

RGB-in is GPS input signal: When connect, please note that all the pin concept has the opposite define with the RGB cable, must connect according to the order of the interface video

generally: the 6th cable is used to control IR cable of GPS/TV.

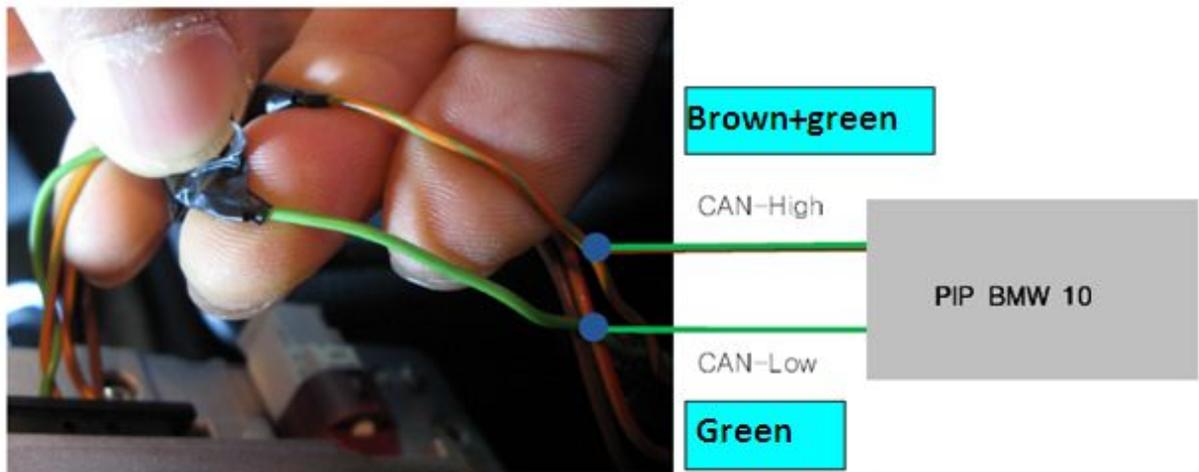

The 7th cable is used to control the IR of DVD

CAN cable introduction

CAN cable has two, connected to control signal CAN HIGH and CAN LOW, please find the CAN LOW and CAN HIGH as the introduction and make sure that your way is right.

How to find CAN HIGH /CAN LOW?

Behind BMW screen control board, you can stop off one cable of the connection, and find a green-brown cable, it is CAN HIGH, another green cable is CAN LOW.

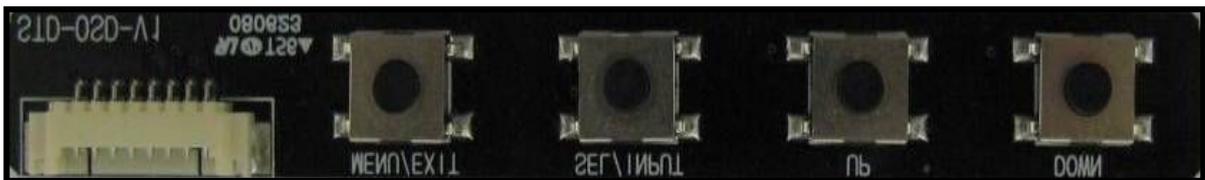

Please do not connect this place wrong.
